Full-Stack Software Engineer | Python · TypeScript · React | Internal Platforms, AI Agents & Automation

SUMMARY

Full-stack software engineer who finds operational bottlenecks and builds the systems that remove them. 1.5 years shipping internal platforms, AI agents, and automation at Four Hands — Python and TypeScript backends, React single-page apps, CI/CD, and production observability across Salesforce, D365, and EDI.

EXPERIENCE

Four Hands — Austin, TX Jul 2025 – Present
Software Engineer (Platform & Internal Tooling)

- **FH Connect Hub:** built the internal EDI support hub — one Node/Express + React app unifying a support mailbox, Jira, Confluence, and Mentis customer data, with an AI assistant that summarizes every partner email and turns it into a ticket (Azure SQL, Azure AI Foundry, Mentis GraphQL, Logic Apps).
- **Three autonomous agents:** SalesforceQA (Jira ticket → generated Playwright spec → PR with real failure diagnosis), Pablo (AI PR reviewer), EDDIE (request → branch → code → tests → draft PR) on claude-sonnet-5 / gpt-4-1 / Azure DevOps.
- **fh-d365-mcp:** read-only MCP server letting QA scripts and AI agents query D365 entities, schemas, and enums (Python, MCP, D365 OData).
- **CI/CD & observability:** Azure DevOps + GitHub Actions pipelines, telemetry/logging/error tracking across async queue workers and event-driven services; 500+ E2E Playwright tests across D365, Salesforce, and eCommerce on BrowserStack.

ZT Systems (acquired by AMD) — Georgetown, TX Jun 2024 – Sep 2024
System Test Engineer / QA Analyst

- Automated RAID/BIOS server validation with Python + Bash (~30% less manual effort); root-cause failure analysis on 75+ hardware configuration issues.

PROJECTS

QA Studio (fh-Axis) — *TypeScript, Playwright*
Automation execution platform — author, orchestrate, and run large Playwright suites with CI reporting.

D365 Recorder / D365 Regression — *Playwright, D365 F&O*
Record → generate → run for Dynamics 365, with a locator registry for stable enterprise UI tests.

d365fo-client — *Python, MCP*
Python client library + MCP server for Microsoft Dynamics 365 Finance & Operations.

StockTradingApp / TradingDashboard — *Python, TypeScript, PostgreSQL*
Full-stack trading system — normalized FastAPI/SQLAlchemy backend with JWT auth + real-time TypeScript dashboard.

Macro Dashboard (economy-analysis-tool) — *Python, Streamlit, LLM*
Research assistant — natural language → FRED charts, Fed speech summaries, LLM Q&A.

SKILLS

Languages: TypeScript, Python, JavaScript, SQL, Apex
Frontend / Backend: React, Angular, Next.js, LWC · Node.js, Express, FastAPI
Data & AI: PostgreSQL, Azure SQL, SQLAlchemy, Azure AI Foundry, Ollama, MCP
Automation & QA: Playwright, BrowserStack, Azure DevOps, GitHub Actions, n8n, Logic Apps
Platform & Integrations: Docker, Azure App Service, systemd, Linux · GraphQL (Mentis), Jira, Confluence, Salesforce, D365 F&O, EDI/X12

EDUCATION

B.S. Computer Science *(Minor in Mathematics)* — Texas State University Graduated 2025
